

Python Summer

Théophile Gentilhomme

July 29, 2025

Table of contents

Summary	4
Objectives	4
Organization	4
I Course 1: Python Basics & Objects	5
1 Description	6
1.1 Objectives	6
1.2 Topics	6
2 Content	7
II Course 2: Functions, Lists, Dictionaries & Classes	8
3 Description	9
3.1 Objectives	9
3.2 Topics	9
3.3 Content	9
III Course 3: Files, Data & Practice	10
4 Description	11
4.1 Objectives	11
4.2 Topics	11
5 Content	12
IV Course 4: Numpy	13
6 Description	14
6.1 Objectives	14
6.2 Topics	14

7	Content	15
V	Course 5: Pandas	16
8	Description	17
8.1	Objectives	17
8.2	Topics	17
9	Content	18

Summary

This course introduces fundamentals of programming using Python.

Learning Python basics for data analytics

Objectives

- Learn basic programming with Python
- Write basic Python code
- Calculations using NumPy arrays (basics)
- Basic data analysis using pandas

Organization

- Language: English/French
- Lab-based courses on Colab
- 5 courses of 1.5 hours: should attend the 5 sessions
- Self-learning: point to videos and/or tutorials (notebooks) covering topics seen in the courses, going a bit further, or introducing concepts of the following course

Part I

Course 1: Python Basics & Objects

1 Description

1.1 Objectives

- Introduction to Google Colab
- How to write simple Python code
- Use variables, numbers, text, conditions, and loops
- Understand that everything in Python is an “object”

1.2 Topics

- Numbers, strings, booleans
- Variables, Operators
- if, else, for, while
- print() and input()
- Object methods like .upper() on strings

2 Content

[Slides](#) [Slides](#) [PDF](#)

Part II

Course 2: Functions, Lists, Dictionaries & Classes

3 Description

3.1 Objectives

- Write code with functions
- Understand and manipulate lists and dictionaries
- Understand what a class is and implement a simple class

3.2 Topics

- define functions
- Lists and their methods
- Dictionaries (key-value pairs)
- Classes: `__init__`, `self`, attributes, and methods

3.3 Content

[Slides](#) [Slides](#) [PDF](#)

Part III

Course 3: Files, Data & Practice

4 Description

4.1 Objectives

- Install/Import packages
- Read and write files
- Work with json data (like spreadsheets)
- Practice previous concepts (functions, classes, dict, etc.) using data

4.2 Topics

- Opening and reading files (.txt or .csv)
- Load a JSON file into Python using the json module
- Work with lists of dictionaries as datasets
- Practice building objects from data, use object in lists, etc.

5 Content

[Slides](#) [Slides](#) [PDF](#)

Part IV

Course 4: Numpy

6 Description

6.1 Objectives

- Use numpy for working with numbers and tables of numbers
- Do fast math on arrays (instead of writing loops)
- Introduction to indexing, broadcasting

6.2 Topics

- Create arrays with numpy
- Reshape and slice arrays
- Do stats with `.mean()`, `.sum()`, etc.
- Work along rows or columns (axis)
- Intro to broadcasting

7 Content

[Slides](#) [Slides](#) [PDF](#)

Part V

Course 5: Pandas

8 Description

8.1 Objectives

- Use pandas to work with CSV data
- Load, filter, group, and summarize data
- Introduction of Matplotlib for visualization

8.2 Topics

- DataFrame and Series basics
- Load CSV files
- Filter rows, select columns
- Compute stats
- Handle missing data
- Simple plots

9 Content
